Logical TA @EvilPanda

Jan 05 · 1 tweets

Never ever think your brain can remember everything, so data down all the coins that you looked at, even if you did not trade it. When that coin pumps you can look back at what parameters might have told you that it could pump. And most importantly which coins tend to rug you.

How did I figure out the parameters for evil panda strat? From data of course. So don't be lazy, treat trading/LP as a business, data can help you a lot avoiding the pitfalls the trenches offer everyday.

The great part of my Evil Panda Strat is that it can filter out most of the coins we see everyday, leaving only 1 or 2 coins to DLMM with. But with high conviction. If you find that there are multiple coins to DLMM with, it means something is not being filtered.

I did not do Evil Panda strat the last 2 days because every coin was filtered out from my data. Here is the most obvious ones where I probably did mention in Advanced bootcamp #6 or #7.

- Avoid political coins
- Avoid Trump/Elon coins
- Avoid Justice for anything coins

It takes time and practice to get it into your head to not touch such coins as when the coin is live, you will see people earning a lot from their trades and maybe the volume will make you forget all the rules.

So data down so your brain can remember what to avoid next time. No one said trading/LP was an easy journey, so put in the work.

@LP Army @Meteora @MeteoraIDN
